

Black

Sample model horse was prepped with Krylon white primer
Number of pigment layers: 6-7

Layer #		Earth Pigment Color	# of Layers	Notes:
1-3	Base color	Burnt Umber	3	Solid over the horse
4	Shading	Black Iron Oxide	1	Solid over the horse but shade very lightly in any area you want lighter such as the flanks, girth area behind the elbows, butt crease, inside upper legs, below the lower eye area, and gender area. Keep in mind black iron oxide is a very strong pigment.
5-7	Shading	Black Iron Oxide	2-3	Shade the body until full black. Matte spray between layers. Do not get pigment on the lighter areas.
